

- Filename
 - amanda_info.pl
- Expected Input/Output
 - Input:
 - Setoff(ID, toBeCheckedPost(amanda,pete,ID), S).
 - Output:
 - S = [p2, p3, p7].
- Why this is unique
 - There is a fact that Amanda has excluded pete's permissions, however, pete still has visibility of amanda's posts through the connection with maria, so Amanda excluding pete does not forbid pete from seeing amanda's posts.
